MEMORANDUM FOR: Dr. Dean Sprague
Defense Intelligence Agency

SUBJECT : CIRIS/IMIS Interface -
CCP/APS Manpower Detail Records

1. In my memorandum to you dated 7 March 1975, I indicated in paragraph 4 that the detail data records sent to IMIS from CIRIS would not contain manpower data. This is incorrect in the case of CCP and APS data.

2. In the cases of APS and CCP, the detail 250 character records will contain manpower data. This is necessary since CCP and APS data in the file CIRIS sends to IMIS will not contain summary records. The lack of summary records in the case of CCP was known to IMIS programmers but as of yesterday, APS will not be submitting summary records to CIRIS since its data will be furnished to CIRIS on the same tape and in the same manner in which CCP submits data. In the past, APS data was submitted to CIRIS manually just like GDIP data.

3. I want to also point out that even though CCP and APS will be submitting manpower data at the detail level, the targeting associated with the detail records containing the manpower data will not be valid. In effect, manpower data will be inserted in CCP and APS detail records at random only so it will be available in the file for the CIRIS system to aggregate it at a point beyond that which creates the CIRIS to IMIS interface tape file.

4. I have discussed this information with [redacted] [redacted] informally on the phone except for the APS portion, since I was not certain as to his accessibility to APS data. In any case, please pass this information onto Informatics for me.
